## **Chelsea Group Paves the Way for Next Generation of Building Scientists**

**By Andy Beth Miller**

Honolulu, HI – Recently, Chelsea Group brought on two new talents to benefit from internships which will span several weeks each, in hopes of encouraging, supporting, and equipping the next generation of Building Scientists. Shelby Patton, along with Building Scientist Halle Senger, are looking forward to molding these young eager minds.

“I am really excited about the two students joining us,” shared Patton. “I think this will be a great opportunity for them to really jump in with both feet and see up-close—in a real and tangible way—what we do here day-in and day-out at Chelsea Group.” According to Patton, the lion’s share of the education will focus on familiarizing the interns with all things CAD as well as providing them the “big picture” of the overall process of how a Chelsea Group project is tackled, step-by-step, from beginning to completion.

“At the end of the day, we’re all still learning,” said Patton, smiling. “And I think this is a great way to solidify concepts at work and book knowledge in interns’ minds, as well as providing great refreshers for us as teachers, reinforcing our own basic fundamental knowledge as teachers—it’s a win-win.”
